

Funded primarily from the National Lottery, this huge new sporting facility on the edge of Sheffield has recently been constructed by Interserve Building.

The large indoor running track and athletics facility contains numerous areas of vertical glazing providing natural light to this area. However, during athletics events it will be necessary to block out the light and main contractor Interserve called in Astralux Systems for advice.

The solution was to install over 150 Astralux 4000 dimout blinds, using group motorised control. This allows the blinds to be opened and closed by simply operating a switch.

Astralux 2000 Venetian Blinds were also installed to the office and meeting room areas.

Benefits

Automatic light control
