

Liverpool John Lennon Airport

Main Elevation

Project

Over recent years Liverpool John Lennon Airport has been one of Europe's fastest growing airports.

The prestigious executive offices at the airport were in need of refurbishment and Pentel Contracts were invited to offer a solution to the on-going problems associated with the original installation.

Solution

After conducting a thorough site survey, Pentel Contracts proposed the Astralux 1000 vertical blind system with Palette fabric as the range offers 65 colours from which to choose.

As a result of the successful installation the client has again contracted Pentel to install additional products elsewhere in the airport.

Benefits

- Effective control of glare and solar gain to ensure a comfortable working environment.
- Simple and quick to operate via cord and chain mechanism.
- Louvres can be tilted to accurately attenuate the amount of light entering the space
- Robust and durable solution

Details

Products:	Astralux 1000 vertical blinds
	Manual operation
	89mm Palette louvres throughout
Contractor:	Technical Construction Group
Client:	Peel Airports
