HSE HQ

Wing atria blinds fully deployed

Project		Solution	
<p>We were presented with the plans for the new HSE Headquarters in Liverpool some two years before the first piece of ground was broken on site.</p> <p>The architect and contractor had a particular issue in providing effective heat and glare control to large expanses of roof atria covering the length and breadth of this modern and open plan building. In addition any proposed solution would need to be installed 13 metres above ground level and therefore a durable and very low maintenance solution was an imperative.</p>		<p>A total of 140nbr Astralux 5000 tensioned roller blind systems were installed with group operation from wireless radio switches.</p> <p>The fabric specification was Carona Screen material which provided effective glare and heat control.</p> <p>Our experienced Astralux installation team used a combination of purpose-built scaffolding, scissor lifts and cherry pickers to provide safe access to all areas, including the circular drum building.</p>	
Benefits		Details	
<ul style="list-style-type: none"> • Combined heat and glare control to provide a comfortable working environment for staff • Simple and effective group operation via individual wireless switches • High performance robust solution with low maintenance requirements • A very discreet solution - when blinds are not required they are withdrawn into the fabric of the building • Installation carried out by highly skilled and experienced installers used to working at height 		<p>Products:</p>	<p>Astralux 5000 fully tensioned roof blind system. Carona Screen fabric</p> <p>Localised group control via wireless radio switches.</p> <p>140nbr systems covering some 2,500m²</p>
		<p>Architect:</p>	<p>Cartwright Pickard Architects</p>
		<p>Contractor:</p>	<p>Kajima UK</p>
