

# No.1 Piccadilly Manchester

External view

Blinds partially deployed

Project		Solution	
<p>This building for the Bank of New York had full height glazing on each elevation.</p> <p>With the extensive use of computer screens a solution was sought to reduce glare to meet EU Directives but still permit an external view.</p> <p>For internal meeting rooms overlooking the atrium space a solution was required to provide privacy to frameless glazing.</p>		<p>Pentel proposed the Astralux System 3000 roller blinds which features a proven and robust operating mechanism. Corona screen fabric was used to provide the correct glare control but preserve an external view.</p> <p>The roller blinds were installed to ensure minimum light gaps where the blinds abutted at the mullions.</p> <p>For the frameless glazing in the meeting rooms a panel glide system was used.</p>	
Benefits		Details	
<ul style="list-style-type: none"> <li>• Effective glare control to provide a comfortable environment</li> <li>• External view preserved</li> <li>• Effortless operation via geared chain drive</li> <li>• Quick and easy screening of meeting rooms with large panel glide system</li> <li>• Robust solution with minimal maintenance requirements</li> </ul>		<p>Products:</p> <p>Astralux 3000 roller blind system. Corona screen fabric.</p> <p>300 nbr with manual operation.</p> <p>Panel glide system with FR fabric and manual operation.</p> <p>Contractor: ISG</p>
